NOTE 1: EOpposite is enabled on children/parent relations and thus parents are updated automatically when we declare another Person to be the child of a Person. However, there is nothing preventing a person from being the parent of itself.

NOTE 2: Marriage relations have to be updated in two places for a fully correct state. Currently there seems to be no way to enforce a correct state similar to the children/parent relation above, due to the fact that `married_to` is a single attribute.

Dynamic Instance
